August 1965

U.S. TRADE IN CANNED FRUITS AND VEGETABLES

U.S. exports of canned fruits and vegetables during 1964 were \$100,365,000 or 25 percent of total U.S. fruit, vegetable, and nut exports. Canned fruit exports were valued at \$69,841,000--up slightly from 1963. A small decrease was noted for canned vegetable exports, estimated at \$30,524,000 during 1964.

Canned peach exports from the United States dropped for the second consecutive year. They totaled 4.7 million cases (24/2½) valued at \$23.4 million, as compared with 5.1 million cases valued at \$25.2 million in 1963. High prices early in the 1964 calendar year and increasing competition from South Africa and Australia for the European market (especially West Germany's and the United Kingdom's) have been attributed as key factors to reduced shipments. The value of 1964 peach exports was \$1.8 million below that of 1963 and \$8.9 million below the 1962 level.

Fruit cocktail, second largest U.S. canned fruit export item, experienced a 10 percent decline from the previous-year level and totaled 2,978,000 cases worth \$21,990,000. In 1963, 3.3 million cases, valued at 22.9 million dollars, were exported. Substantially higher U.S. prices seem to have had a negative influence on U.S. markets in Canada and the United Kingdom, as did tariff preferences for similar products such as mixed fruits from Australia and South Africa. However, U.S. shipments to other important markets in West Germany, Belgium-Luxembourg, and the Netherlands all increased in 1964.

U.S. canned pineapple exports appear to be growing in importance, amounting to 2,445,000 cases in 1964. By value, it accounted for \$16.6 million or 24 percent of all U.S. canned fruit exports. The 1964 figure is up 30 percent from the 1963 level and 25 percent from the 1959-63 average. West Germany is the single largest market for U.S. canned pineapple and during 1964 imported 852,000 cases valued at over \$5 million. Compared to the previous year, the 1964 German imports increased by 292,000 cases (52 percent) and 51 percent by worth.

Canned pear and apricot exports are both steadily decreasing by both volume and value. During 1964, pear shipments, which were sent mainly to Canada, amounted to only 124,000 cases valued at \$1,073,000. Only 132,000 cases of canned apricots were exported in 1964--down 60,000 from the previous year. The leading markets for U.S. apricots during 1964 were Belgium-Luxembourg (42,000 cases) and Canada (26,000 cases). Reportedly, shipments to Belgium-Luxembourg are eventually re-exported to other destinations.

Exports of U.S. canned cherries (mainly tart) were more than double those of 1963 and totaled 310,000 cases. The upward trend during the past several years is in part a reflection of lower U.S. prices. Belgium-Luxembourg and West Germany have been principal U.S. overseas markets and together imported more than 70 percent of total U.S. canned cherry exports in 1964.

During the past several years, the U.S. export market for canned grapefruit has been declining severely both by volume and value. Grapefruit exports in 1964 fell to 74,000 cases as compared to 120,000 in 1963, 370,000 in 1962, and 456,000 in 1961. The high domestic price in the United States resulting from the freeze of Florida oranges in 1962-63 and the quota restrictions in the United Kingdom have been major factors affecting decreased export sales.

Canned baby food (fruit) exports continued on an upward trend and totaled 119,000 cases in 1964--up 39,000 cases or 49 percent from the previous year. Although 1964 exports reached \$1.6 million, or 43 percent greater than in 1963, they were only 2 percent larger than the 1959-63 average.

Canned asparagus exports from the United States in 1964 dropped for the second consecutive year and totaled 2,058,000 cases--17,000 cases below 1963 and 79,000 below 1962. Although 1964 volume declined, the value of asparagus exports rose slightly, indicating a continuing strong foreign market. Traditionally, asparagus has been the most important U.S. canned vegetable export item, during the 1960-64 period accounting for as much as 38 to 53 percent of the value of all canned vegetable exports.

U.S. exports of canned corn continued on an upward trend in 1964 and reached 326,000 cases worth \$1.4 million. The increase was 58,000 cases above the 1963 figure and 113,000 over 1962, partly because of lower unit prices.

U.S. canned tomato exports jumped sharply in 1964, when they totaled 407,000 cases, or nearly threefold from the previous year. In contrast, canned tomato paste exports dropped 117,000 cases from the 1963 figure and totaled 408,000 cases valued at \$2.5 million. Tomato paste exports have recently followed an up-and-down pattern with 1964 a "down" year. Canada has been the major export market for canned tomatoes and tomato paste, importing over 80 percent of the former and more than 50 percent of the latter.

Exports of canned peas appear to be slowly declining from the United States, during 1964 reaching 180,000 cases--down 10 percent from 1963 by volume and 8 percent by value. Imports by the principal foreign markets of Canada and Italy did not change significantly from the previous year's, with the bulk of the 19,000-case decrease resulting outside the European complex.

U.S. canned string bean exports fell sharply in 1964 and totaled 140,000 cases, or approximately 75 percent below 1963. Reduction of West German imports, the leading U.S. market for this commodity, accounted for over 80 percent of the drop. Domestic production in Germany and other countries during this period had been rising rapidly.

Canned soup exports increased to 588,000 cases and were by value slightly above the 1959-63 average of \$3,150,000. Exports to Europe have been decreasing, while those to Canada and other countries have shown an upward trend. Baby food exports rose sharply in 1962, dropped in 1963, and rose distinctly in 1964 when they totaled 153,000 cases. The United Kingdom was the leading market for baby food and the 1964 U.S. exports to that country were 42,000 cases, more than double that of the previous year. Part of this increase was probably due to lower prices.

U.S. Exports of Selected Canned Fruits and Canned Vegetables,
